SUMMARY

Full-stack Software Engineer with 3 years of experience shipping production systems, from Go/Django APIs and React frontends to computer-vision pipelines deployed at enterprise sites. Builds AI-native products, integrating Gemini and custom YOLOv5 models into real applications, and uses Claude Code and Cursor daily to accelerate design, coding, debugging, and documentation. Strong on clean architecture, API design, and debugging live systems; comfortable owning features from requirements to deployment on AWS and GCP.

TECHNICAL SKILLS

Languages: Golang, C++, Python, SQL, Dart, JavaScript

Frameworks: Gin, Django, Qt (Qt5/Qt6), React, Flutter, OpenCV, MediaPipe

Databases: PostgreSQL, SQLite, Firebase

Cloud & DevOps: AWS (SES, EC2), Google Cloud Platform, Docker, Jenkins, Git, Bitbucket

ML & AI: YOLOv5, TensorRT, FP16 Quantization, Google Gemini, Hyperparameter Tuning

Other: REST APIs, JWT, WebSockets, SSH, GORM, Linux, Jira, Confluence, Embedded Systems (Jetson, Rockchip), PLC (Modbus, Siemens LOGO!)

EXPERIENCE

Product Developer

Nov 2025 – Present

Krisko

Remote- Freelancer

- Built **FaceShape AI**, a real-time full-stack web app using React, MediaPipe, and Django that leverages computer vision and Google Gemini to analyze facial features and recommend eyewear via a hybrid ML pipeline.
- Developed the **Go backend for an IELTS exam platform** with REST APIs, PostgreSQL, and JWT auth covering exam delivery, evaluator queues, analytics endpoints, a cached YouTube RSS proxy, and weekly-streak logic; shipped via Docker on GCP with Cloud Storage media handling.
- Built **Econ**, a full-stack lodge management system in Go (Gin) with clean architecture, GORM/SQLite, JWT auth, and GST-compliant billing; packaged React frontend as embedded asset in a single Go binary deployed via Electron.

Software Engineer

Aug 2023 – Nov 2025

Perleybrook Labs Pvt Ltd

Kerala, India

- Designed and deployed scalable Golang backend services and data pipelines, including SSH-enabled modules for remote diagnostics and WebSocket channels for low-latency streaming between frontend and backend.
- Optimized PostgreSQL queries and stored procedures, enhancing reporting and analytics performance; integrated AWS SES with Golang/Django backends, automating 100+ daily client notifications and reducing manual reporting by 90%.
- Migrated 50K+ line Qt application framework from Qt5 to Qt6, improving performance by 10% and reducing maintenance overhead; built real-time object detection modules in Qt (C++) with spatial-temporal event triggers.
- Engineered and fine-tuned YOLOv5 models for PPE compliance, vehicle detection, and human activity recognition on datasets of 20K–100K+ images; applied TensorRT and FP16 quantization to accelerate inference on Jetson devices.
- Built SDK integrations for embedded AI platforms (Jetson, Rockchip), customized Buildroot OS distributions, and engineered industrial PLC (Modbus, Siemens LOGO!) integrations with Flagman software.
- Managed CI/CD pipelines using Jenkins for staging and production deployments, including PR reviews and automated build releases; leveraged Gen AI assistants (Claude Code, Cursor) to reduce delivery time by 20%.
- Led end-to-end deployment of AI-powered monitoring systems at 5+ enterprise client sites including **Coca-Cola, ITC, Saint-Gobain, Unilever, Godrej, Hyundai, and Kia**, ensuring 99% uptime and seamless integration with legacy infrastructure.
- Delivered 10+ client training sessions and technical documentation, driving 100% adoption of AI dashboards; served as liaison between product, engineering, and client teams.
- Participated in sprint planning, requirement discussions, code reviews, release coordination, and production deployments using Agile methodologies.

PROJECTS

Cloud-Jazzz | *Go, Chi, SQLite, JWT, REST API*

- Built a self-hosted cloud storage server in Go with RESTful APIs, JWT authentication (HMAC-SHA256), SQLite (WAL mode), chunked file uploads, and path-traversal-protected filesystem browsing.
- Enabled video streaming using HTTP Range requests and packaged as a single-binary deployment using go:embed.

Smart Surveillance System (IoT) | *Flutter, OpenCV, Python, Firebase, Raspberry Pi*

- Developed a face detection system using OpenCV DNN integrated with a Flutter app via Firebase, with secure door unlocking controlled by Raspberry Pi and Python.

Tally 2.0 | *C++*

- Developed an inventory management system for wholesale/retail dealers with stock record add/edit/update functionality for efficient inventory handling.

EDUCATION

Sathyabama Institute of Science and Technology

Bachelor of Engineering in Computer Science and Engineering (CGPA: 8.57)

Chennai, India

2019 – 2023

CERTIFICATIONS & LANGUAGES

Certifications: Flutter Framework Training; Python (Coursera); JPMorgan Chase & Co. Excel Skills Virtual Experience (Forage, 2023)

Languages: English, Malayalam, Hindi
